

## Enterprise Ethernet. Now orbit-ready.

Razorback brings enterprise grade Ethernet switching directly to your spacecraft, supporting everything from straightforward connectivity to sophisticated onboard networking. For missions requiring greater bandwidth and scalability, Puma extends the proven Razorback architecture with enterprise-grade 10 Gigabit Ethernet networking and support for both electrical and optical interfaces, enabling the next generation of high performance spacecraft.

---

### Scalable Architecture

Build anything from a simple network to a distributed spacecraft architecture by expanding ports, configuring custom topologies, & balancing redundancy with connectivity.

### Enterprise Networking

Support everything from straightforward connectivity to sophisticated network architectures through advanced traffic management, filtering, monitoring, & VLAN capabilities.
